Data Quality Score: 100/100

1,004 Total Rows	25 Columns	0 Duplicates
---------------------	---------------	-----------------

Executive Summary

This dataset contains 1004 records across 25 columns, structured under the 'General' domain taxonomy. It scores 100/100 on overall data quality, with duplicate rows accounting for 0 records.

Key Insights & Trends

- Column 'Delivery Duration (min)' has an average value of 28.51, ranging from 17.50 to 37.50.
- Column 'Toppings Count' has an average value of 3.38, ranging from 1.50 to 5.00.
- Column 'Distance (km)' has an average value of 4.94, ranging from 2.00 to 9.75.
- For categorical field 'Restaurant Name', the most frequent entries are 'Domino'S' (212 times), 'Papa John'S' (204 times).
- For categorical field 'Pizza Size', the most frequent entries are 'Medium' (429 times), 'Large' (240 times).

Dataset Column Schema & Quality Profile

Detailed mapping of the dataset columns, data types, completeness, and outlier rates:

Column Name	Type	Missing %	Outliers	Unique Count
Order ID	text	0.0%	0	1004
Restaurant Name	categorical	0.0%	0	6
Location	text	0.0%	0	84
Order Time	datetime	0.0%	0	968
Delivery Time	datetime	0.0%	0	980
Delivery Duration (min)	numeric	0.0%	0	6
Pizza Size	categorical	0.0%	0	4
Pizza Type	categorical	0.0%	0	12
Toppings Count	numeric	0.0%	0	5
Distance (km)	numeric	0.0%	0	25
Traffic Level	categorical	0.0%	0	3
Payment Method	categorical	0.0%	0	6
Is Peak Hour	boolean	0.0%	0	2
Is Weekend	boolean	0.0%	0	2
Delivery Efficiency (min/km)	numeric	0.0%	0	39
Topping Density	numeric	0.0%	0	35
Order Month	datetime	0.0%	0	12
Payment Category	categorical	0.0%	0	2
Estimated Duration (min)	numeric	0.0%	0	25
Delay (min)	numeric	0.0%	6	52
Is Delayed	boolean	0.0%	0	2
Pizza Complexity	numeric	0.0%	0	10

Traffic Impact	numeric	0.0%	0	3
Order Hour	numeric	0.0%	0	6
Restaurant Avg Time	numeric	0.0%	0	6

Data Anomalies & Action Recommendations

! Column 'Delay (min)' has 6 outliers that lie outside standard statistical boundaries.

Predictive Analytics: Delivery Duration (min) Forecast

Using an automated predictive regression model (R-squared: 0.14, historical standard deviation: 419.69), the system calculated the following trend outlook over the next 6 periods:

Future Period	Predicted Value	Lower Bound (95%)	Upper Bound (95%)
2026-08	501.28	0.00	1323.86
2026-09	422.73	0.00	1327.57
2026-10	339.43	0.00	1326.54
2026-11	251.40	0.00	1320.76
2026-12	158.62	0.00	1310.24
2027-01	61.10	0.00	1294.98
